

AI Career Pulse: Decoding the Job Market

Section 3: Data Visualization

Aman Srivastava | SkillWallet Data Analytics Program

3. Data Visualization

With the data source cleaned and enriched, eight individual worksheets were built — each answering one specific business question — before being combined into the dashboard and story.

3.1 Worksheet Summary

Sheet	Chart Title	Chart Type
Sheet 3	Job Category vs Annual Salary (USD)	Grid of totals by category
Sheet 4	Job Title vs Average Annual Salary (USD)	Bar chart, 23 job titles
Sheet 5	Company Size vs Annual Salary (USD)	Horizontal bar, 5 company sizes
Sheet 6	Key Performance Indicators (KPIs)	KPI summary table
Sheet 7	Job Title vs Job Count	Horizontal bar, Top 5
Sheet 8	Industry vs Salary Tier	Bar chart, 12 industries
Sheet 9	Number of Jobs Posted by Year	Cross-tab, 2025 vs 2026
Sheet 10	Experience Level vs Salary	Bar chart, 4 levels

Design choices: SUM was used where total market value mattered (e.g., category totals), while AVG was used for per-role/per-experience comparisons — keeping the two lenses distinct to avoid a misleading single narrative.

3.2 Sheet 3 — Job Category vs Annual Salary (USD)

Rows/columns show SUM(Annual Salary USD) per Job Category across all 11 categories. AI Engineering (7,631,000 in the filtered view) is visually emphasized in a darker accent color due to its outsized value versus Data Science (2,467,000), Governance (1,568,000), Architecture (906,000), and the rest.

3.3 Sheet 4 — Job Title vs Average Annual Salary (USD)

A 23-bar vertical chart ranking every individual job title by AVG(Annual Salary USD), led by Senior ML Engineer and AI Solutions Architect near the top of the range.

3.4 Sheet 5 — Company Size vs Annual Salary (USD)

A horizontal bar chart comparing SUM(Annual Salary USD) across the five company-size bands (Big Tech, Enterprise, Mid-size, SME, Startup). Bar lengths are visually close, indicating salary investment is fairly evenly distributed rather than concentrated in Big Tech.

3.5 Sheet 6 — Key Performance Indicators (KPIs)

A compact text-table summarizing three headline metrics: AVG(Annual Salary USD) = \$170K, AVG(Salary Min USD) = \$144K, and MIN(Years Of Experience) = 1 year.

Key Performance Indicators (KPIs)		
\$173K	\$141K	1
Avg. Annual Salary	Avg. Salary Min	Min. Years Of Experience

3.6 Sheet 7 — Job Title vs Job Count

A horizontal lollipop/bar chart of CNTD(Job Id) by Job Title, filtered to the Upper-Mid (\$150–200k) Salary Tier and limited to the Top 5. Generative AI Engineer and Robotics Engineer (AI) lead with 4 postings each.

3.7 Sheet 8 — Industry vs Salary Tier

A vertical bar chart of CNT(Job Id) across 12 industries, each bar labeled with its dominant Salary Tier. Consulting (11), Government (10), and Research (9) lead the Upper-Mid tier.

3.8 Sheet 9 — Number of Jobs Posted by Year

A simple two-column cross-tab comparing job posting counts: 2025 = 36, 2026 = 55, illustrating a ~53% year-over-year increase in hiring volume.

Number of Jobs Posted by Year	
2025	2026
177	253

3.9 Sheet 10 — Experience Level vs Salary

A 4-bar chart comparing AVG(Annual Salary USD) across Senior (6–9 yrs), Lead (10+ yrs), Mid (3–5 yrs), and Entry (0–2 yrs). Values are tightly clustered: \$172,214 / \$171,071 / \$170,474 / \$166,167 — revealing that experience has a surprisingly small effect on pay.
