

AI CAREER PULSE

Decoding the Job Market

Project Initialization & Planning Phase

Program	Data Analytics with Tableau
Project Type	Individual
Tools	Tableau Desktop / Tableau Public
Phase	Project Initialization & Planning
Date	25 June 2026

1. Define Problem Statement

The AI job market spans multiple stakeholder groups, each facing unique challenges in navigating rapid industry transformation. This project addresses three distinct personas:

01	Fresher Candidate Fresh graduates lack market visibility and struggle to identify industries and companies that actively hire at entry-level for AI roles.
02	Mid-Level Professional Experienced professionals face career stagnation and uncertainty about transitioning into AI without losing the value of domain expertise.
03	Senior Professional Senior leaders risk obsolescence as AI shifts market expectations from technical execution to governance, strategy, and innovation leadership.

Core Business Question

How can data-driven BI insights from the 2025–2026 AI job market empower professionals at every career stage to make informed decisions about roles, industries, salaries, and skill development?

Key Problem Dimensions

- Salary transparency across experience levels, industries, and company sizes

- Identification of high-demand AI roles and required education levels
- Industry-wise entry points and growth corridors for AI careers
- Trend analysis to detect shifts in hiring patterns across 2025–2026

2. Project Planning

Work Breakdown Structure (Epics)

Epic / Task	Description
Data Collection & Extraction	Gather AI job market dataset (2025–2026) covering roles, salaries, industries, company sizes, and education levels
Data Preparation	Clean, normalize, and structure raw data; handle null values, duplicates, and type inconsistencies for Tableau readiness
Data Visualizations	Build individual charts — salary distributions, role demand heatmaps, industry comparisons, experience-level breakdowns
Dashboard	Assemble an interactive multi-persona dashboard linking all visualizations with filters and cross-highlighting
Story	Create a Tableau Story with annotated narrative slides guiding stakeholders through the three career scenarios
Performance Testing	Validate dashboard load time, filter responsiveness, and cross-visualization accuracy
Web Integration	Publish to Tableau Public; integrate demo link and GitHub repository link into SkillWallet project card
Project Demonstration & Documentation	Record a walkthrough video, finalize README, and prepare presentation materials

Tools & Technology

- Tableau Desktop / Tableau Public — primary BI and visualization platform
- Microsoft Excel / CSV — dataset format for ingestion
- GitHub — version control and project documentation repository
- SkillWallet — project management and mentor review platform

3. Proposed Solution

The solution leverages Tableau's interactive BI capabilities to produce a data-driven platform that serves each stakeholder persona with targeted insights drawn from the 2025–2026 AI job market dataset.

Persona-Specific Solutions

▶	Fresher Candidate Entry-level salary filters, industry hiring frequency maps, and junior role dashboards to guide first job decisions.
▶	Mid-Level Professional Salary growth trajectory charts, transferable-skills mapping, and AI role crossover analysis to support confident career transitions.
▶	Senior Professional Enterprise hiring trend analysis, senior salary benchmarks, and leadership-role demand insights for strategic repositioning.

Project Deliverables

Deliverable	Description
Interactive Dashboard	Multi-tab Tableau dashboard with persona-based filters covering salary, role, industry, and experience dimensions
Tableau Story	Annotated story arc walking through each of the three career scenarios with data-backed recommendations
GitHub Repository	Full project source including dataset, workbook (.twbx), and documentation README
Demo Recording	Walkthrough video demonstrating dashboard interactions and key insights for mentor evaluation

Success Criteria

- Dashboard clearly addresses all three persona scenarios with dedicated filter views
- Salary, role demand, and industry insights are accurate and reproducible from the source dataset
- Story narrative is coherent and communicates actionable recommendations
- Published Tableau Public workbook is accessible and loads within acceptable time
- GitHub repository is documented with README, dataset reference, and workbook file
